

Waveform predistortion: before / after (sqc)

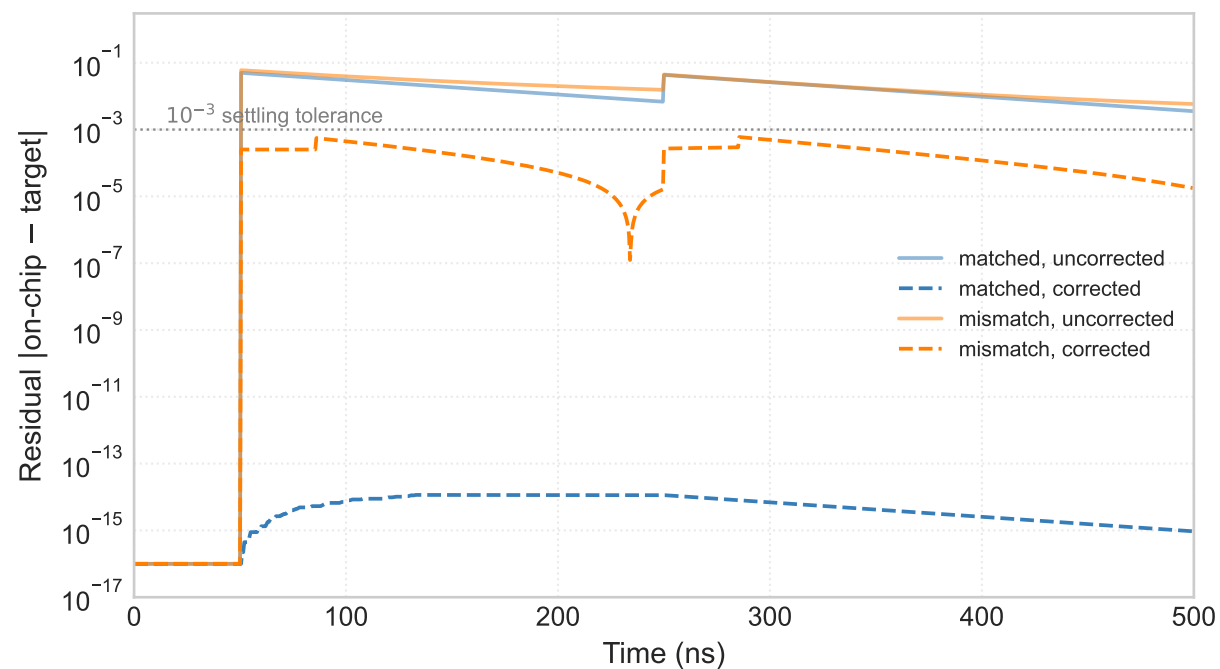

(a) Matched model: single_exp truth, single_exp fit
algebraic ceiling

(b) Mismatched model: 2-component truth, 3-component fit
realistic device

(c) Residual (log-y): matched hits machine precision,
mismatch leaves a real floor

(d) Waveform played by the AWG:
edge overshoot + tail droop is the price of a flat chip
